ABOUT

Full Stack Developer experienced in designing SaaS and microservices applications with modern frontend and backend frameworks. Skilled in writing efficient, high-quality code for impactful projects, building dynamic forms, task systems, complex dashboards and performance optimization.

TECHNICAL SKILLS

Back-end: C#, ASP.NET, ASP.NET MVC, ADO.NET, Web APIs, Microservices, GraphQL

Front-end: Angular, HTML/CSS, JavaScript, TypeScript

Languages: C, C++, C#

Developer Tools: Git, Docker, Microsoft Azure, Visual Studio, SQL Server, Sentry, HangFire, Serilog

Academic Skills: OOPS, DSA, DBMS, Design Patterns

EXPERIENCE

CodeTrade India PVT LTD

Software Engineer

Jaipur, Raj

July 2023 – Present

- Worked on a **SaaS** application for commercial risk and cost monitoring, supporting **multi-tenant** customization to meet diverse client requirements. Built **dynamic forms** logic so that form fields can be modified via database at any stage making fields mandatory, removable, or addable without code changes.
- Designed and implemented a configurable background email notification service using Hangfire with cron scheduling based on RRule definitions. Enabled event-driven email triggers for object lifecycle actions (Create, Update, Delete), including automated support notifications for faulty or failed object processing scenarios.
- Designed and developed a dynamic variable resolver service for email and document templates, enabling runtime replacement of placeholders with actual related object data. Implemented configurable template mappings and context-based value resolution to support automated notifications, generated documents, and workflow-driven communications.
- Optimized and fine-tuned APIs at four critical points, reducing data-fetch time from **~10 seconds** to **~500ms**, achieving **20× faster** performance.

Software Engineer Intern

Jan 2023 – July 2023

- Contributed to a healthcare **microservices** project using **GraphQL**, **Angular**, and **ASP.NET Core**. Implemented **API Gateway** with **.NET Ocelot** to route requests to specific services. Developed and maintained **GraphQL API** endpoints using C# .NET and **MS SQL Server**. Created a **Kanban** dashboard with pagination (5 records/type) and **caching** to eliminate repeated **DB calls** and handle large data objects efficiently.

PROJECTS

Twitter Clone | ASP.NET Core, Angular, HTML/CSS, TypeScript, REST API, Socket.IO

- Built a responsive social media web application inspired by Twitter/X using Angular. Implemented modular components, reusable services, dynamic feed rendering, and responsive UI design. Integrated real-time messaging and post sharing using Socket.IO for instant user interaction. Focused on scalable architecture, performance optimization, and clean user experience.

E-Commerce | ASP.NET Core, WEB API, C#, MS SQL Server, Angular

- Developed a full-stack E-Commerce application featuring authentication, REST APIs, product catalog, and cart management with a responsive and modular architecture, utilizing Angular, ASP.NET Core, SQL Server, Git, and Visual Studio for efficient development workflows, application lifecycle management, and optimized database operations.

ACHIEVEMENTS

- 500+ problems solved on [Leetcode](#)
- [5* HackerRank](#) and Max [CodeChef](#) rating: 1535
- 100+ problems solved on [Codeforces](#)

EDUCATION

JAIPUR ENGINEERING COLLEGE RESEARCH CENTRE

Bachelor of Technology in Computer Engineering, (CGPA-8.7)

Jaipur, Raj

Aug. 2019 – July 2023
